

ES/BL 307 - CLIMATE AND THE VEGETATION IN THE BLACK FOREST AND THE SWISS ALPS

IES Abroad Freiburg

DESCRIPTION:

Students will be introduced to the climate, regional climates and some microclimates in the Black Forest and the Swiss Alps and their impact on vegetation. Students will learn to recognize vegetation zones. They will also learn about the Biosphere-Atmosphere interactions and how to measure different climatic and physiological parameters that are relevant for vegetation development. They will be able to detect microclimatic influences on habitats. Moreover they will be capable to understand possible influences of climate warming and fluctuations on the vegetation cover. This course includes several half / and full-day excursions / field trainings.

CREDITS: 3 credits

CONTACT HOURS: 45 hours

LANGUAGE OF INSTRUCTION: English

PREREQUISITES: Basic knowledge of climate/weather and vegetation ecology, enjoy the outdoors and be moderately fit for hikes (6 miles/ 10 km; 2600 feet altitude difference/800m in one day).

ADDITIONAL COST: none

METHOD OF PRESENTATION:

- Lectures
- Student summaries
- Seminar discussions
- Student presentations
- Group work
- Field studies

Additional material comes from Moodle. This platform is also the place to share assignments and to follow recent developments in the field. Participation is part of the student's grade, therefore it is expected that all students contribute during classes.

REQUIRED WORK AND FORM OF ASSESSMENT:

- Course participation – 20 %
- Short presentation in small groups – 20 %
- Field Trip reports – 30 %
- Final Exam – 30 %

Course Participation – 20 %

Students are expected to participate in debates with questions related to the readings and Students are required to complete all reading assignments and will be expected to demonstrate this through regularly assigned homework, pop quizzes, and/or insightful and relevant contributions to in-class discussion. All these components will count toward the class participation grade. Participation also applies to course-related trips, outings and/or special events in and around Freiburg. A rubric for participation is available in the appendix and on Moodle.

Short presentation in small groups – 20 %

You will be assigned to one presentation (depending on enrollment, 1-3 students per presentation) with assigned literature. Each student/group is allowed approx. 10-15 minutes to present the topic and 5-10 additional minutes to facilitate a discussion with the class. The presentation must be uploaded on Moodle by midnight on the evening before it will be held.

The presentations will focus on the basics of and aim for a mutual understanding of each assigned topic. The discussions aim to provide a deeper understanding of the topic with examples.

Field Trip reports – 30 %

Students are requested to write a report of one of the field trips following a standardized structure including a) basic information (date, location, route), a summary of the factual information provided by the instructor, b) a summary of the field survey, c) a reflection on the personal learning outcome and connection to in-class discussions and readings. Overall framework: 500-700 words, plus images, figures and/or tables

Final Exam – 30 %

The final exam will be a comprehensive assessment of all topics covered in the course. An essay format will be used, and students will have 90 minutes to complete the exam in class. Detailed information on the content of the final exam will be distributed in advance. Question format will include short essay questions.

LEARNING OUTCOMES:

By the end of the course students will be able to:

- understand that the current vegetation cover is a result of previous and actual regional climates and microclimates
- demonstrate special aspects about alpine climate
- recognize important plant species which were examined during the course to show climatic adaption and resilience
- prescribe how climate influences the distribution and composition of the vegetation and how the plant cover can influence climate
- analyze vertical vegetation zones and their response on climatic fluctuations
- analyze the impact of regional climate and microclimate on the physical form of alpine plants
- measure meteorological parameter of the air, parameter of the soil and physiological parameter of different low level and alpine plants.
- use Assmann's Aspirated Psychrometer, thermometers, laser thermometers, barometer, photometer and a fluorometer and understand how they work
- drill core samples and to interpret those concerning climatic influence
- differentiate the plasticity of plants and plant societies in respect of global warming
- assess ecological risks and opportunities under changing environmental conditions.
- communicate the gained knowledge in oral (short presentation, discussions, round table discussions) and written form (field report)

Attendance Policy (see also the detailed version on Moodle ESS Academics page)

IES Abroad courses are designed to utilize the unique contribution of the instructor; the lecture/discussion format is regarded as the **primary mode of instruction**. Therefore, attendance is mandatory. Any unexcused absence will incur a penalty on your final course grade. Deductions from grades due to absences are based on contact hours (= 45 minutes). Any unexcused absence will result in a penalty on your final course grade (1 unexcused contact hour absence - 1%, 2nd unexcused contact hour absence -2%, 3rd unexcused contact hour absence – 3% and so on). Any student who misses more than 25% of a course (= more than 11 contact hours), whether the absences are excused or are unexcused, will receive an "F" as the final grade in the course.

ESS courses may have entire course blocks that take place on one day in addition to longer field trips that count for several contact hours. In this case, the actual missed contact hours are added together, and the absences are sanctioned according to the rule above. If you are late for a planned field trip, you will generally not be able to join the trip, since the group needs to leave on time and cannot wait for one person. Punctuality is therefore essential here. If you miss a class, it is **your responsibility** to make up on everything that was covered in class. Tests/presentations missed during unexcused absences **cannot be made up**.

Arriving late for class: Punctuality is important for the planned course schedule. If you are late for class, the late time will be recorded and added up at the end of the course. You will receive a grade reduction based on the accumulated amount of missing contact hours (as outlined above; i.e., if you were late by 15 minutes on 3 days, your grade would be reduced by 1% for 1 missing contact hour).

LATE OR FAILURE SUBMISSION OF ASSIGNMENTS: Late submission of assignments or failure of submission of assignment results in the grade F of that particular assignment. This does not apply to late or non-submission due to illness with an excused absence.

Excused absence: Please call the IES Center before the start of your first class if you are ill and would like to be excused from your course, as outlined in the "Cell Phone and Attendance Policy" handed out during orientation. Student Affairs staff will decide whether your absence can be excused directly or whether a doctor's note is necessary. Absences due to religious observances and family emergencies may be excused at the discretion of the Center Director, with written approval. A petition for an excused absence due to a religious holiday needs to be submitted 2 weeks in advance. If permission is granted, the student needs to inform the Academic Dean, the Student Affairs Team and their instructors. Absences due to private travel or travel delays cannot be excused, even with advanced notice.

ACADEMIC INTEGRITY CODE:

Students are expected to abide by the IES Abroad Code of Academic Integrity. The detailed IES Abroad academic integrity code can be accessed on Moodle.

All work submitted by a student for academic credit should constitute the student's own original work. Regardless of the quality of work, plagiarism will result in a failing grade for the course and/or an academic review and possible expulsion from the program. Plagiarism may be broadly defined as "copying of materials from sources, without acknowledging having done so, claiming other's ideas as one's own without proper reference to them, buying materials such as essays/exams, and using AI-generated content without disclosure."

As AI tools continue to evolve, learning how to use them responsibly is an important emerging skill. Some of our courses allow students to explore the use of generative artificial intelligence (GAI) tools such as ChatGPT for some assignments and assessments. The instructor of each course will communicate whether GAI may be used in a course and provide specific guidelines and procedures for its appropriate use.

Updated information on your course and readings, including additional readings from journalistic articles, can be found on the Moodle platform at <https://moodle.iesabroad.org/login/index.php>

CONTENT:

Week	Content	Assignments and Readings
Week 1	Session 1: Welcome and introduction to course resources & structure and registration for student presentations Lecture: Global atmospheric circulation, climate and weather. Meteorological parameters. Vegetation zones – global, regional, local.	Required readings: • Scherrer, <u>alpine plant diversity</u>, pp. 1-11. • Stoutjesdijk, <u>Microclimate</u>, pp. 136-141. • Körner, <u>Alpine Plant Life</u>, pp. 1-3, 7; 21-26; 38-45; 80-92. • Wallace, <u>Atmospheric Science</u>, pp. 41-44, 48-56; 391-395, 404-408, 410-411.

	Session 2: Lecture: Microclimates and microhabitats. Life forms, adaptations, modification, acclimation and niches of alpine plants.	Required readings: • Lowry, <u>Weather and Life</u>, pp. 9-12 and 163-181. • Körner, <u>Alpine Plant Life</u>, pp. 9-12, 47-52; 70-74 and 106-114.
	Session 3: Lecture: Vegetation and climate of the Black Forest. Measurement of meteorological parameters	Required readings: • Wallace, <u>Atmospheric Science</u>, pp. 343-344 and 391-395, 404-408, 410-411. • Körner, <u>Alpine Plant Life</u>, pp. 133-139; 171-175, 180-186, 196-200; 114-119; 121-123.
	Session 4: Field trip to the St. Wilhelm Valley	
	Session 5: Lecture: Dendrochronology and climate (case study)	Required readings: • Schweingruber, <u>Treerings and Environment Dendroecology</u>, pp. 442-447, 499. • Anstett, <u>Dendrologische und ökologische Untersuchungen</u>, abstract.

Week 2	Session 6: Field trip to the nature reserve Buchswald in Grenzach with practical dendrochronology and field measurements	
	Session 7: Lecture: Biosphere-atmosphere interactions and the concept of "limitation".	Required readings: • Ellenberg, <u>Vegetation ecology</u>, pp. 388-403 and 467-469. • Körner, <u>Alpine Plant Life</u>, pp. 296-298.
	Session 8: Field trip to the Swiss Alps.	
	Session 9: Field trip to the Swiss Alps.	

	Session 10: Field trip to the Swiss Alps.	
Week 3	Session 11: Lecture: Climate fluctuation, climate warming and effect on vegetation cover.	
	Session 12: Student presentations.	
	Session 13: Student presentations.	

	Session 14: Student presentations.	
	Session 15: Final exam.	

COURSE-RELATED TRIPS:

- Black Forest
- Swiss Alps

Appendix:

Rubric for course participation:

A	Excellent participation The student's contributions reflect an active reading of the assigned bibliography. Skillfully synthesizes the main ideas of the readings and raises questions about the applications and implications of the material. Demonstrates, through questions and comments, that they have been capable of relating the main ideas in the readings to the other information discussed in the course and with their own life experience. The student makes informed judgments about the readings and other ideas discussed in class, providing evidence and reasons. They respectfully state their reactions about other classmates' opinions and can contribute to the inquiry spiral with other questions. The student gets fully involved in the completion of the class activities.
B	Very good participation The student's contributions show that the assigned materials are usually read. Most of the time, the main ideas are identified, even though sometimes it seems that applications and implications of the information read were not properly reflected upon. The student can construct over others' contributions, but sometimes seems to interrupt the shared construction to go over tangents. They are respectful of others' ideas. Regularly involved in the activities but occasionally loses concentration or energy.
C	Regular participation The participant evidences a regular reading of the bibliography but in a superficial way. They try to construct over others' ideas, but commonly provide comments that indicate a lack of preparation about the material. Frequently, contributions are shallow or unarticulated with the discussion in hand.
F	Insufficient participation Consistently, the participant reads in a shallow way or does not read at all. Does not participate in an informed way and shows lack of interest in constructing over others' ideas.
